Protein/Creatinine Ratio, 24 hrs Urine

Date	22/May/2023 08:35AM	Unit	Bio Ref Interval
Total Volume	2200	ml/Day	1500 - 2500
Urine Protein	55.56	mg/dL	0.0-10.0
Urine Creatinine	20.11	mg/dL	
Alkaline picrate kinetic			
Protein/Creatinine Ratio	2.76		< 0.2
Calculated			

Comment 24 Hrs urine protein/creatinine ratio (PCR) is required for confirmation of ruling out significant proteinuria in positive reagent strip or positive random urine PCR. Because creatinine excretion in the urine is fairly constant throughout 24 Hrs period, measurement of PCR ratio allows correction for variation in urinary concentrations.

Proteinuria is seen in Nephrotic syndrome, diabetic nephropathy, monoclonal gammopathies and other myeloproliferative or lymphoproliferative disorders, abnormal renal tubular absorption, urinary tract malignancies, and inflammatory, degenerative and irritative conditions of the lower urinary tract.

Kindly correlate with clinical findings

Conditions of Reporting: 1. The tests are carried out in the lab with the presumption that the specimen belongs to the patient name as identified in the bill/test request form. 2. The test results relate specifically to the sample received in the lab and are presumed to have been generated and transported per specific instructions given by the physicians/laboratory. 3. The reported results are for the information and interpretation by the referring doctor only. 4. Some tests are referred to other laboratories to provide a wider test menu to the customer. 5. Max Healthcare shall in no event be liable for accidental damages loss, or destruction of specimen which is not attributable to any direct and mala fide act or omission of Max Healthcare or its employees. Liability of Max Healthcare for deficiency of services, or other errors and omissions shall be limited to fee paid by the patient for the relevant laboratory services.
